Pat McCormack

Web Developer

About

I'm a Web Developer with knowledge of front end development but with an interest and growing passion for all areas of Web Development. My goal is to learn and continue to build my skills as a web developer and have a strong understanding of the necessary skills of a strong developer.

My background before web development was composing, performing and mixing music.

Portfolio Projects

Project 1 React Card Matching Game

My main portfolio project is a React based card matching game that solidified my understanding of the facets of React. This project has quite a few more components than my Todo list and I learned a lot of the details of passing state between components and how the flow of components from the App should look. I also learned a lot more about effects and how to implement them.

Project 2 React Todo List

a todo list was my first React project that taught me the fundamental flow of a React app. this project taught me how to build components and gave me a basic understanding of state and effects. Buillding this project gave me enough of an understanding of the key components of React and allowed me to move on to my main project

Employment History

Audio Engineer, Freelance // Self Employed, Mississauga

January 2019 – December 2020

As an Audio Engineer I mixed podcasts and local artists and did composition and mixes for Game Development students, Indie Game Developers, as well as Youtubers and Twitch streamers.

CSR, Keyholder // Rona, Mississauga

January 2016 – December 2018

Taking information and utilizing software to input data for inventory orders, contractor accounts and customer credit accounts. Completed opening and closing procedures including safe & till counts. Trained new employees in all procedures with own experience in all departments. Working between multiple PC's for web orders. Providing correspondence with clients for large contractor orders.
